TUESDAY, APRIL 15 @ 12:00PM

The Impact of the Opioid Crisis on Infants, Children, and Adolescents

The presentation will provide an overview of how the pediatric community has been impacted by the opioid crisis. An overview of trends in pediatric morbidity and mortality related to opioids in general and fentanyl specifically will be provided. The talk will also present recent data related to the circumstances behind fatal pediatric opioid poisonings and the risk of maltreatment among infants, young children, and adolescents.

The Center for Health Services Research at IFH coordinates the Special Populations Core Seminar Series of the New Jersey Alliance for Clinical and Translational Science (NJ ACTS), an academic and healthcare consortium based in the Rutgers Institute for Translational Medicine and Science that advances research through resources, training, and community engagement.
