NJ acts

Join us for the NJ Acts Biostatistics and Epidemiology Workshop Series:

The Gap-Closing Estimand:

A causal approach to study interventions that close disparities across social categories

This workshop will introduce causal decomposition analyses as developed in biostatistics and in the social sciences, the causal assumptions those analyses require, and methods available for estimation.

Thursday, March 9, 2023 2:30pm – 4:00pm

Presenter:

Ian Lundberg, PhD
Assistant Professor of Information
Science at Cornell University

Target Audience:

This workshop is designed for researchers familiar with basic statistics (e.g., regression). Programming examples will use R, but the underlying causal concepts will be accessible to those unfamiliar with R.
